### NEW!! PULSE CROP DISEASE MODELS

Pulse crop disease models have recently been added to the extensive list of disease models available in FieldClimate.

- Ascochyta Blight
- Grey Mould
- Sclerotinia Sclerotiorum on Rape
- Alternaria Model

**WHO KNOWS HOW TO PREDICT AN INVISIBLE AND COSTLY FUNGUS PRESENT IN YOUR CROP? METOS KNOWS.**

It's no secret that some diseases are notoriously difficult to control and that timing of your fungicide application is critical to keep disease at bay.

The use of METOS Canada monitoring stations gives your farm a timely disease heads-up. Used with our widely tested and proven disease models, you can act fast for a more efficient application of fungicides. When you apply at the optimal time, you use less chemical and maximize your crop yield and quality.

METOS Canada Plant Disease Models are developed through 30 years of international scientific cooperation with research institutes and universities. The models have been field-tested by farmers across different climates and environments, so you can trust the models you're using are based on leading science and backed by farmers like you.
